# III International Congress on Cardiovascular Diseases

28<sup>th</sup>-29<sup>th</sup> November, 2023 - Taormina (IT)

## **RATIONAL**

In these last years we have witnessed an explosive growth of Cardiology involving both diagnosis and therapy fields. This has resulted in a marked improvement of patients' management. Accordingly, a deep review of the diagnostic and therapeutic algorithms for all cardiovascular diseases has been introduced providing new models much more effective in clinical practice. The continuous update of the guidelines by the major international scientific societies (e.g., European Society of Cardiology) is the evidence of this wide dynamism of the knowledge in cardiovascular diseases.

For all these reasons, the organization of an International Congress of Cardiology, where will attend international and national speakers who have highly distinguished in the research and clinic, assumes an important meaning. The main objective of the Congress will be to provide an appropriate scientific updating on major cardiovascular diseases such as heart failure, ischemic heart disease, valvular disease, cardiomyopathies, arrhythmias, cardio-oncology. One session will be dedicated to the role of imaging in the field of the important cardiovascular diseases. The program also includes some lectures on emerging issues. The topics to be addressed and the quality of the international and national speakers is a guarantee of the high scientific profile and the good result of the congress.
